

This chapter applies to all use of respirators at work.

Important:

Before you decide to use respirators, you're required to evaluate respiratory hazards and implement control methods as outlined in chapter 296-841 WAC, Respiratory Hazards.

The term "respiratory hazards" will be used throughout this chapter to refer to oxygen deficient conditions and harmful airborne hazards.

Definition:

Respirators are a type of personal protective equipment designed to protect the wearer from respiratory hazards.

Reference:

See WAC 296-800-160, Personal protective equipment (PPE) to find requirements for other types of personal protective equipment (PPE), such as eye, hand, and head protection.
